

FAZAL WAHEED

AI Automation Engineer | Full-Stack Developer | Machine Learning

+92 343 9266684 | fazlawahed1345@gmail.com | github.com/fazalwahed | linkedin.com/in/fazal-wahed-106a59394 | Islamabad, Pakistan

PROFESSIONAL SUMMARY

Final-year Software Engineering student and Full-Stack Developer with hands-on experience building AI-powered systems, machine learning pipelines, and intelligent automation solutions. Developed a production-grade Student Performance Prediction system using Python, scikit-learn, Gradient Boosting, and FastAPI — demonstrating direct alignment with AI Automation Engineering. Proficient in REST API development, Python scripting, React.js, React Native, Node.js, and MERN stack. Experienced in integrating ML models into full-stack applications, deploying via RESTful APIs, and designing intelligent systems that automate data-driven decisions. Seeking an AI Automation Engineer role to apply ML expertise and automation skills in a real-world, innovation-driven environment.

CORE COMPETENCIES & TECHNICAL SKILLS

AI & ML	Machine Learning · Gradient Boosting · Random Forest · Logistic Regression · scikit-learn · Model Training & Evaluation · Predictive Analytics · NLP Basics
Automation	REST API Automation · ML Pipeline Automation · Process Automation via Python · Intelligent System Design · FastAPI · Joblib
Backend	Python · FastAPI · Node.js · Express.js · JWT Authentication · RESTful APIs · Pydantic · Uvicorn · bcrypt
Frontend	React.js · React Native · Next.js · JavaScript · HTML5 · CSS3 · Tailwind CSS · Bootstrap · Redux Toolkit · Axios · Vite
Data & DB	pandas · NumPy · MongoDB · JSON · Data Preprocessing · Feature Engineering · CSV Data Pipelines
DevOps & Tools	Git · GitHub · VS Code · PyCharm · Postman · pytest · JIRA · Agile/Scrum · Swagger UI · Nginx
Other	WordPress · WooCommerce · SEO Optimization · Cloud Storage Integration · Server-Side Rendering (SSR)

KEY PROJECTS

EduPredict — AI Student Performance Early Warning System — Final Year Project 2025 – 2026

Python · FastAPI · scikit-learn · Gradient Boosting · Random Forest · React.js · React Native · REST API · JIRA · Agile

- Engineered a full-stack AI automation system that predicts student academic risk (At Risk / Safe) using machine learning, eliminating manual monitoring and enabling automated, data-driven intervention.
- Trained and evaluated 3 ML classification models (Gradient Boosting, Random Forest, Logistic Regression) — Gradient Boosting achieved 100% accuracy and F1-score; Logistic Regression achieved 98.36% accuracy.
- Built and deployed a RESTful prediction API using FastAPI, serving real-time ML inference with sub-500ms response time — a direct example of AI process automation via APIs.
- Designed a dual-platform system: React.js web application + React Native mobile app, both consuming the shared Python AI backend, supporting 3 user roles (Student, Teacher, Admin) with JWT-secured access control.
- Implemented intelligent next-semester GPA forecasting module providing automated forward-looking academic predictions, reducing need for manual academic counselling.

- Managed project with Agile/Scrum methodology using JIRA for sprint planning across 7 sprints — from ML pipeline to full deployment.

Instagram Clone — Full-Stack Social Media Application — Personal Project

2024

MongoDB · Express.js · React.js · Node.js · JWT · Redux Toolkit · Cloud Storage

- Built a complete social media platform (MERN stack) with JWT authentication, post creation, image upload, likes, comments, and user profiles — deployed with cloud media handling.
- Implemented secure authentication with JWT, responsive mobile-like UI using React, and optimized API performance through efficient data fetching and Redux state management.

adamlaw.org — Live Law Firm Website — Freelance / Real Deployment

2024

Next.js · Server-Side Rendering · SEO · Responsive Design

- Developed and deployed a production law firm website using Next.js with SSR for performance optimization and SEO-friendly architecture — currently live in production.
- Ensured cross-device responsiveness and smooth user experience through modern web practices and performance tuning.

eCommerce Platform — Personal Project

2023

WordPress · WooCommerce · Payment Gateway Integration · SEO

- Designed and deployed a dynamic eCommerce site with product catalog management, secure payment gateway integration, and custom UI/UX — optimized with SEO best practices.

WORK EXPERIENCE

Intern Frontend Developer — Learning Horizon (Remote)

Jan 2023 – Apr 2023

JavaScript · React · REST APIs · Git · Team Collaboration

- Worked on real-world frontend applications within a professional software development team, contributing to client-facing product features.
- Assisted in REST API integration, debugging, and feature implementation — gaining exposure to production-grade development workflows.
- Collaborated with senior developers using Git version control and participated in code reviews and agile sprint meetings.

EDUCATION

Bachelor of Science — Software Engineering (BSSE) — Abasyn University Islamabad Campus

2022 – 2026
Final Year Student | FYP: AI-powered Student Performance Prediction System

HSSC — FSc Pre-Medical (Science) — Iqra Science School & College, Paharpur

2021 – 2022

SSC — Science — Iqra Science School & College, Paharpur

2019 – 2020

CERTIFICATIONS & TRAINING

MERN Stack Development Certification — NAVTTC (National Vocational & Technical Training Commission)

Sep 2025 – Dec 2025

- Completed industry-focused training covering MongoDB, Express.js, React.js, and Node.js with real-world project implementation.
- Built and deployed full-stack applications with RESTful APIs, JWT authentication, responsive design, and Git version control.

WHY AI AUTOMATION ENGINEERING

Through building EduPredict — a machine learning system that automates academic risk prediction via REST APIs — a direct understanding was developed of how AI models can replace manual processes with intelligent, scalable automation. Applying these skills at 99x Automation to engineer real-world AI automation solutions is the natural next step, leveraging demonstrated experience in Python ML pipelines, API-driven AI deployment, and full-stack integration.
